WHAT IS GAMMIS & WHY IS IT CHANGING

What is GAMMIS and why is it changing?

1. Georgia Medicaid Management Information System, known as the new GAMMIS, is the DCH browser-based, real time and online management information system.

2. The new GAMMIS replaces the existing MMIS and significantly enhances the claims processing and related activities for DCH-managed programs, such as Managed Care Health Plans, PeachCare for Kids™, and others.

3. The new GAMMIS was constructed with the following priorities:

   - Assumption of operations without disruption in services or payments.

   - Maintaining and achieving federal MMIS certification.

   - Compliance with all HIPAA requirements.

   - Timely design and development of new components affecting providers (Web Portal, Web-based claims submission).

   - Design and development of components that improve efficiency and convenience for State staff.

   - Design and development of components that improve Contractor efficiency.
